CASE STUDY : Path Edging at Innsworth Gloucester

A new product from FSP was requested to be installed at The Old Station Nursery, Innsworth near Gloucester.

94m in 1.4m lengths of 175mm deep path edgings were ordered by Walsh Construction Ltd via E.H. Smith builders merchant.

They were installed between the soft play area and garden inside the nursery and between the path and grassed areas leading from the car park to the building.

Mr Phill Crosbie of Walsh Construction commented:

“The units were easily installed and have proved to be perfect for the job. He also commented that the management from the nursery are very happy with the outcome. There is a strong but unobtrusive edge between a number of materials and areas”.
